

# DIGITAL OVERWATCH: REAL-TIME FORCE PROTECTION

Digital Overwatch provides situational awareness in permissive, semi-permissive, and contested areas through understanding the RF, wireless, network, application, and information environments.

## Sense

Real-time information pipeline from edge sensors/devices to the cloud and back.

## Evaluate

Tactical mission network integration provides a dynamic mechanism for authentication, transport, services, applications, and hardware.

## Effect

Provides indications and warning of potential digital threats in the environment to decision-makers and edge operators.

## A Suite of Applications, Pipelines, Analytics, and Visual Components That Checks Every Box

- ☒ A cloud-focused scalable platform enabling data-driven operations, policymaking, and successful mission execution.
- ☒ Leverages RF survey, wireless analytics, commercial telemetry data and other publicly available information (PAI) to provide enhanced awareness of threats.
- ☒ Zero licensing fees attached to usage with the ability to add features and capabilities based on your unique mission set.
