

# SEE THE INVISIBLE BATTLESPACES

Merlin is a software suite that provides unmatched decision support for pre-, in-, and post-mission understanding of the spectrum battlespace.

## Comprehensive

Merlin provides situational awareness of the Invisible Battlespaces using highly responsive visualization, computation, and analysis.

## Extensible

Merlin scales from small units to theater-level operations while handling a wide range of spectrum-dependent systems.

## Versatile

Merlin supports pre-mission planning; live, virtual, and constructive (LVC) execution; and post-mission data analysis for Multi-Domain Operations to provide comprehensive situational understanding.

## A Software Suite That Checks Every Box

- ☒ Provides actionable situational awareness of Electronic Warfare effects at near real-time performance.
- ☒ Capable of modeling and rendering platforms, weapons, and equipment from mission scale up to the full area of responsibility (AOR).
- ☒ Deploys on everything from tactical laptops to high-end workstations and cloud-based virtual environments.
